

Networked Supplier Compliance

**Like having x-ray vision into supplier shipments,
Supplier Compliance is your early warning system for
lot-level compliance issues.**

The World Today

One bad shipment reaching your production line can gum up the works – sometimes literally. But there's a limit to what teams can do manually, and that's a recipe for high risk and high burnout.

Your World Tomorrow

Identify potential issues automatically and flag them for focused action, letting teams spend time where it's most valuable. Manage and track CARs in the same platform, letting you score suppliers and invest in the partners that have your back.

Why We're Different

Networked Supplier Compliance stops trouble before it happens, but there's a bigger picture. By connecting to the industry's most powerful, global network of suppliers, brands, Co-Mans, and external data sources, we put supplier compliance in context with networked intelligence and risk data from around the world.

What We Provide

- AI-driven technology reads and qualifies CoAs and lab results against specs, stopping non-compliant shipments
- Score and rank supplier performance
- Integrated loss recovery protects your interests and helps you spot trends
