

DATA SHEET

Connect Your Supply Chain For Transparency, Collaboration, and Timely Decision Making

TraceGains turns your supply chain into a data-powered strategic asset and engine for growth.

Disconnected Systems and Incompatible Data Sets are Slowing Teams Down:

- Traditional ERP and PLM systems, along with other systems of record, are complex and rigid, containing only internal operations data. This approach is insufficient in a world where up to 75% of your data lives with your supply chain partners.
- Employee adoption of legacy tools remains low. Many stakeholders circumvent PLM and ERP systems, manually rekeying data only when reminded to do so, resulting in significant human error and gaps in mission-critical data.
- Due to the incomplete and incompatible data sets within systems of record, businesses require slow and labor-intensive manual intervention to identify trends and mitigate risk.

Not Having a Unified View of Your Business Hurts the Bottom Line

Companies need visibility into the complete history of the ingredients, items, and materials that go into their products and all the processes along the way. Consumers demand it, and regulators require it. But many companies still maintain islands of supply chain and product information spanning divisions and departments without a unified view of product formulas, specifications, compliance documentation, and other crucial supply chain and product information. And when it comes to suppliers and co-manufacturers, even more essential information is missing. This lack of visibility into the business leads to higher costs, variable quality standards, and increased risk. Most of what you need for supply chain transparency lives in your regulatory documentation and systems of record. But, when scattered across shared drives, email folders, and legacy systems, you can't harness it for crucial supply chain insight and proof of compliance. Fortunately, there's a better way.

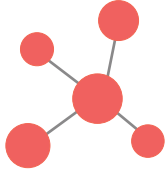

TraceGains Connects People and Information so Teams Can Work Smarter

The benefits companies gain by connecting their supply chain with TraceGains are profound, including increased revenue, larger market share, and less waste. With TraceGains, a networked platform connects departments with suppliers and co-manufacturers and plugs into your systems of record. Teams leave behind static tools like shared drives, emails, databases, and paper while tapping into the value of legacy systems. And every stakeholder has access to detailed information on the origin and status of each material or ingredient.

It's this complete supply chain transparency that underpins a networked approach to supply chain management, regulatory compliance, and product quality and innovation. TraceGains digitizes everything from formulas to specifications to compliance documentation and other product and supply chain information turning it all into digital records that are easy to manage. You can combine the data from TraceGains with your systems of record to gain a unified view of your products, data, and processes across your business and throughout your supply chain, no matter how dispersed or complex. When this happens, teams can respond quickly to market, customer, and supply chain shifts while offering substantial value to everyone in your connected supply chain.

Lack of insight isn't an option for brands that want to succeed. The amount of disruption in today's supply chain requires businesses to respond in real-time.

Achieve Digital Transformation with TraceGains

Connected Systems

By centralizing and streamlining supply chain information, team collaboration, and product development processes, teams can work smarter while preserving PLM and ERP system integrity.

Single Data Entry

Stakeholders enter data once either into TraceGains or systems of record, with the ability to push master data to other connected systems and stakeholders within the ecosystem.

Digital Document Management

TraceGains digitizes everything from specifications to certifications to allergen forms and uses the data to power configurable dashboards and reports for real-time supply chain insight.

Networked Platform

With network connectivity, TraceGains gives teams instant access to the supply chain data they need to streamline and automate product development, quality assurance, and regulatory compliance.

Automate Collaboration

TraceGains eliminates internal and external silos, replacing them with a single location that connects stakeholders, automates business processes, and standardizes and digitizes supply chain and product documentation.

Supply Chain Transparency

Teams gain a detailed view of each material or ingredient's origin and status throughout the supply chain to make informed decisions and mitigate the most critical threats to the business in real-time.

Pass data back and forth from your PLM and ERP systems and TraceGains, or handle it all in TraceGains for less cost and complexity.

"Integrating our systems with TraceGains has increased our visibility from QA to the plant floor to Purchasing and across our supply chain. We now have one version of the truth, which allows us to ensure our high-quality standards are met."

-George Muller, VP Information Services & Chief Information Officer

About TraceGains

Founded in 2008, TraceGains connects people and information so teams can work smarter. As a global technology company, we provide networked innovation, quality, and compliance solutions to consumer brands that want to reduce supply chain risk, speed up business processes, and take control of data. On average, companies find 80% of their suppliers already on TraceGains Network, allowing them to connect and collaborate instantly.
