

# DOCUMENT MANAGEMENT

## Traditional vs. TraceGains

TraceGains digitizes everything from specifications to certifications to allergen forms and uses the data to power configurable dashboards and reports for real-time insight. We connect your supply chain and automate most of the work so your team can work smarter.

### Traditional Document Management

Suppliers are backlogged and slow to respond to customer requests, often filling out the same forms and answering the same questions again and again.

### TraceGains Document Management

Suppliers submit information, documents, and standard online forms to all customers at once on TraceGains Network.

### SUBMISSION

### COLLECTION

Teams log into TraceGains Network, to connect with their suppliers, and get instant access to documents and data.

Suppliers send documents to customers by email, fax, posting them on single-use portals, or other manual methods.

Companies find that on average  
**80%**  
of their suppliers are already on TraceGains.

### STORAGE

Teams file paper documents, scan them into shared drives, or save them on their desktop to deal with later.

Documents, information, and agreements are digitized, centralized, and tracked for easy search, version control, send, print, and audit trail.

### INSIGHT

Documents are filed away and misplaced, making them hard to find later, there's no way to track versions, and teams can't mine them for business insight or identify problems.

TraceGains uses your data to power dashboards and reports so your team can spot issues and track trends, workflows with automatic alerts keep documents, approvals, and tasks current.
