

Horizon Scanning Global

Comprehensive horizon scanning and global risk management data.

The World Today

Every ingredient in your supply chain has the potential to create risk, but the information you need to stay ahead is spread over dozens of data sources, making data hard to find, and making issues easy to miss.

Your World Tomorrow

Relevant, real-time data from around the world can be mapped to your ingredient supply chain, providing research updates and alerts automatically, in context, when the data matters most.

What We Provide

- Industry-leading incident and risk data from TraceGains and SGS DigiComply.
- Risk and incident data is mapped to the ingredients you use, letting you source and monitor with confidence.
- Configurable Watchlists for ingredients and suppliers.
- Seamless enterprise integration for instant identification of impacted products and formulas.
- Collaboration tools and team Workspaces built in.

Why We're Different

Ingredients are surrounded by critical data, but it isn't always visible. TraceGain and SGS DigiComply draw on thousands of global data sources to make Networked Ingredient data visible at every stage of your business, while keeping it relevant to the materials you source and use.

FEATURES

- Global coverage for tens of thousands of monthly incidents and risk alerts.
- Intelligence on over 170,000 suppliers worldwide
- AI-based tools map ingredient alert data to your unique supply chain for proactive alerting.
- Full enterprise integration makes it easy to identify impacted recipes and finished goods in the case of an issue.
- Data backed by SGS DigiComply, the industry standard for global intelligence in Food and Beverage.
- Search by supplier, incident type, region, pathogen, and hundreds of other variables.
- Create shared watchlists for monitoring and alerts.
- Share information securely with configurable, collaborative workspaces in TraceGains Gather®

Global visibility. Real world relevance.
